Technical Field The present invention relates to the treatment of hazardous waste, and more particularly, to a flotation method and apparatus for removing a metal impurity from a hazardous waste, such as spent phosphoric acid, and especially, a method and apparatus for removing mercury and cadmium contained in spent phosphoric acid, by means of magnetic separation.

2. Description of the Related Art Hazardous waste, such as spent phosphoric acid containing heavy metals such as mercury and cadmium, is generated in a great amount during production of phosphoric acid and aluminum. Because of the high cost of removing mercury and cadmium, these heavy metals are discharged without being

treated to landfills. The heavy metals, which are water soluble, such as mercury and cadmium, are easily adsorbed to silica gel which is widely used in the production of phosphoric acid. When a silica gel-impregnated solution is circulated
