Currency Converter Calculator A calculator is a computational aid that performs arithmetical operations, such as addition, subtraction, multiplication, and division, with symbols and numbers entered by the user. Calculators are often used in place of a mathematical formula, especially in situations where a calculator or machine is more convenient than a

pencil and paper. Early calculators were less sophisticated than their modern descendants, but the first calculators were simple slide rules and logarithmic scales. The first mechanical sliding-rule calculator was the "Babbage's Difference Engine" built around 1822. It had 18 wheels (as many as there were decimal places to calculate), one of which was "work", and could

perform addition, subtraction, multiplication, and division. CalculatorFunctions: -------------------- To get an overview of the functions, click "CalculatorFunctions". ██████
